COUPÉ STYLE

In the short time since its 1996 launch, the Fiat Coupé has already built a reputation as the sports coupe par excellence.

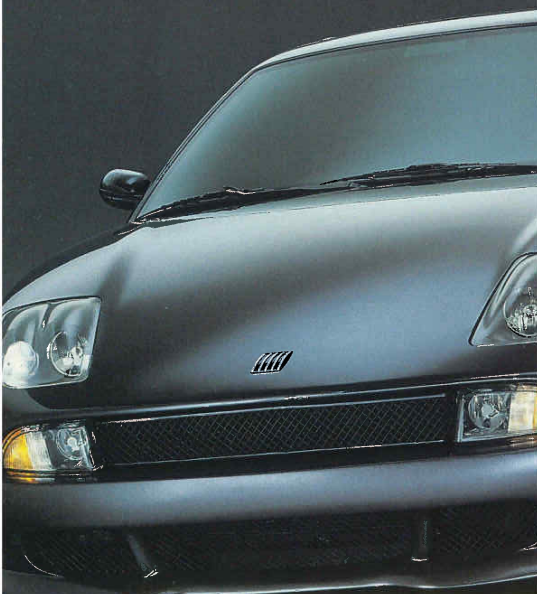

Universal acclaim from the motoring press and television culminated in the 1996 WHAT CAR? Magazine Best Coupe award. Since then we have installed an all-new 5 cylinder 20 valve engine of even greater power and efficiency, and again in 1997 WHAT CAR? Magazine voted it the Best Coupe.

Today, the Fiat Coupé's combination of peerless performance, immaculate road manners and stylish, coachbuilt bodywork sets the standard by which all other coupes are judged.

It's a hard act to follow - which is why we have been particularly careful in our selection of accessories.

The exclusive range you see here has been designed in the finest Italian tradition of high performance engineering and rigorously tested on the car to confirm the quality and suitability of every product.

There could be no finer complement to the Coupé's thoroughbred looks and performance than your individual choice of Fiat-approved accessories.

COUPE

DISTINCTION

5

6

For use on standard, medium and top line bars.

5907183

4 Rear Window Sun Blind

Shaped to fit rear double window.

5907655

TOURING

COUPE

***Electric Sunroof - Large Top Slider**

Offers wider opening. Roof slides externally and operates electrically.

Glass dimensions: 803mm x 462mm. 5908440

***Reverse Parking Sensors**

Metasystem reverse parking sensor can be effective when parking. It consists of two capsules which are fitted to the number plate. An acoustic signal goes off whenever the vehicle approaches an obstacle. Signal frequency increases when the object comes closer to the vehicle's rear end. A small LED display tells you which side the obstacle is located.

5909175

***Proxel Parking Sensor**

This item represents a useful aid during parking: an acoustic signal indicates the presence of obstacles within a broad protected area of some 70 cm.

1. The EPS parking sensor is based on an innovative conception whereby low-energy electromagnetic waves are emitted by an aerial strip bonded inside the bumper.

2. At the moment the device is activated, a protected area is set up all around the bumpers.

3. An acoustic signal is heard when any obstacle enters this monitored area and approaches the vehicle fitted with the sensor.

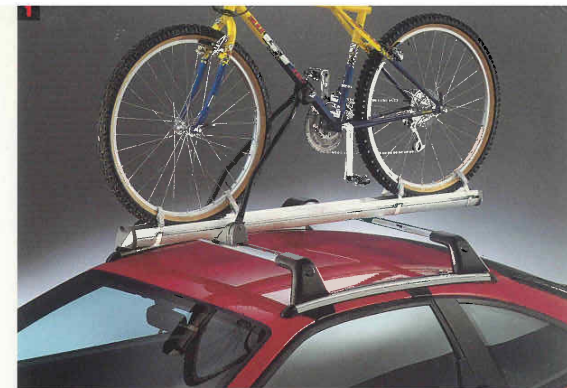

4. Signal frequency increases as the obstacle comes closer to the rear bumper.

5909885

5 Emergency Credit Card Key
